

Vanities and shelving made of Schlüter-KERDI-BOARD

Ideal tile substrate

Schlüter-KERDI-BOARD is the ideal substrate for constructing vanities and shelving with tile coverings. Using KERDI-BOARD as a building panel makes it possible to quickly and easily build the vanity structure with the technical and aesthetic requirements of the tile covering in mind.

KERDI-BOARD is dimensionally stable and waterproof. Panels and openings are easily cut with a utility knife.

The visible edges can be finished in a number of ways, including:

- Matching U-shaped system profile of brushed stainless steel in combination with a corresponding finishing profile such as Schlüter-RONDEC or Schlüter-QUADEC
- Schlüter-RONDEC-CT or Schlüter-RONDEC-STEP edge profiles
- Tile strips and two finishing profiles such as Schlüter-RONDEC or Schlüter-QUADEC

Suitable panel thickness of Schlüter-KERDI-BOARD

Select the panel thickness according to the size and expected stresses of the project. 2" (50 mm)-thick panels are suitable for building the structure, while 3/4" (19 mm)-thick panels can typically be used for shelving.
